Gents

Below is my informal DAR from the SQSS Review panel.

- Most notable item is that the SQSS change to re EREC P28 is unlikely to be approved before 1 April 2019, so that could mean that the DCode P28 implementation could be deferred until 2019 as well.

Other interesting snippets highlighted in yellow

4 Modifications / Withdrawal P28		<ul style="list-style-type: none"> Previous discussion at last panel meeting, it was agreed to retain the graph in 6.1 AMC Concerns about the poss confusion between planning and operational standards. Cornell – these are more or less the same things – time delays between shunt reactor switching eg 3% every 10 minutes. Also ramp rates on DC links switching filters. This will make it easier for the SO, so there is a benefit to the SO. The Consultation will be update to reflect this. Apparently the old curve in Fig 6.1 was based on the Pst 0.5 figure in P28, so the proposal is to just to do the same. AMC to liaise internally and with DNOs to make sure we're happy. Comments by the 21st then proceed to consultation on 26th provide no adverse comments have been received.

8		<ul style="list-style-type: none"> GSR023 & GSR024 are both being considered by Ofgem. These would be wrapped up in a single SQSS change GCode and DCode decision on P28 might need to be deferred until April 2019. The P28 SQSS change is unlikely to be approved before April 2019 as there is a plan to wrap some existing SQSS and some ongoing ones with the P28 one. SQSS Mods do seem to have a track record of being delayed so this sounds non ideal.
