

**Distribution Code Review Panel
Meeting 73 – Thursday 6 December 2018**

Paper by Code Administrator

We are in the process of reviewing the proposed revision of P2/6 in accordance with DCRP/18/03. As part of our review we have identified two issues.

1. The proposed changes in EREC P2/7 will result in a change to the distribution license conditions. Specifically Standard Licence Condition 24 (Distribution System planning standard and quality of performance reporting) (SLC 24) which references ER P2/6. We are proposing the following change

(a) a standard not less than that set out in Engineering Recommendation P.2/7 of the Energy Networks Association, or such issue thereof as may be directed by the Authority, so far as that standard is applicable to it; or

The rationale for this change is that future changes to the SLC 24 as a result of an update to EREC P2 will be handled by a direction from the Authority rather than a change to legal text. Do you have any objections to proposed text? Note that this will be proposed in a SLC consultation document.

2. ER P2/6 is referenced in the Distribution Connection and Use of System Agreement (DCUSA). Changes to the DCUSA are proposed by parties to the agreement. How do you propose to proceed with updating the DCUSA?

If you could let me know your thoughts by end of next week 16th November 2018.

Kind Regards

Bryan
